1. Executive Summary

This DPIA Screening assesses whether the processing activities associated with the **Veltrixa Cloud AI Document Classification Service** are likely to result in a **high risk to the rights and freedoms of natural persons**, thereby requiring a **Data Protection Impact Assessment (DPIA)** under **Article 35 of the General Data Protection Regulation (GDPR)**.

The screening is based on the documented solution design and supporting governance documentation, with the **Veltrixa Data Flow Mapping v1.0** and the **Privacy by Design Review v1.0** serving as the primary sources of evidence. The assessment considers the nature, scope, context and purposes of the processing together with the safeguards incorporated into the documented solution.

The screening evaluates the processing against the relevant criteria established by **Article 35 GDPR**, the **European Data Protection Board (EDPB) Guidelines on DPIAs**, and recognised supervisory authority guidance relating to high-risk processing activities. Particular consideration is given to the use of AI-assisted processing, the categories of personal data processed, the scale of processing, the involvement of vulnerable data subjects, international data transfers and the safeguards implemented to mitigate privacy risks.

Based on the documented evidence reviewed, the processing activity does **not** appear likely to result in a high risk requiring a mandatory DPIA under Article 35 GDPR. While the solution processes personal data that may include special category information and incorporates AI-assisted functionality, the documented architecture includes appropriate technical and organisational safeguards, including mandatory human review, role-based access control, secure processing, documented retention controls and comprehensive governance documentation.

This screening reflects the documented solution at the time of assessment. Where future changes introduce new processing purposes, greater automation, expanded AI capabilities, large-scale processing, additional categories of personal data or changes to the overall risk profile, the DPIA screening should be reviewed and a full DPIA undertaken where the criteria under Article 35 GDPR are met.

2. Document Control

Field	Value
Document Title	DPIA Screening – AI Document Classification Service
Document ID	VG-PGO-DPIAS-001
Organisation	Veltrixa ApS (Fictional)
Solution	Veltrixa Cloud AI Document Classification Service
Document Owner	Privacy Governance Office
Business Owner	Product Management
Technical Owner	Cloud Engineering
Prepared By	Christian Vinther
Status	Final
Classification	Internal
Review Frequency	Prior to significant processing changes or introduction of new high-risk processing activities
Primary Legislation	GDPR Article 35
Supporting Guidance	EDPB Guidelines on Data Protection Impact Assessments (WP248 rev.01)
Primary Evidence	Veltrixa Data Flow Mapping v1.0; Privacy by Design Review v1.0

3. Version History

Version	Date	Author	Description
1.0	July 2026	Christian Vinther	Initial issue.

4. Purpose

The purpose of this DPIA Screening is to determine whether the processing activities associated with the **Veltrixa Cloud AI Document Classification Service** are likely to result in a **high risk to the rights and freedoms of natural persons**, thereby requiring a **Data Protection Impact Assessment (DPIA)** under **Article 35 of the General Data Protection Regulation (GDPR)**.

The screening provides a structured and evidence-based assessment of the documented processing activities, taking into account the nature, scope, context and purposes of the processing, as well as the technical and organisational measures incorporated into the documented solution design.

The assessment is based primarily on the **Veltrixa Data Flow Mapping v1.0** and the **Privacy by Design Review v1.0**, which together provide the documented evidence describing the processing activities, system architecture, governance arrangements and privacy safeguards implemented within the solution.

Specifically, this screening seeks to:

- determine whether the documented processing is likely to result in a high risk to the rights and freedoms of natural persons;
- assess the processing against the relevant screening criteria derived from **Article 35 GDPR** and recognised supervisory authority guidance;
- document the rationale supporting the screening outcome;
- determine whether a full DPIA is required; and
- provide a documented decision supporting the organisation's privacy governance process.

This screening represents a preliminary governance assessment and should not be interpreted as a full Data Protection Impact Assessment or as a comprehensive legal compliance review. Where the documented processing changes significantly or new risk factors are introduced, the screening should be repeated to determine whether a DPIA becomes necessary.

5. Scope

This DPIA Screening covers the documented processing activities associated with the **Veltrixa Cloud AI Document Classification Service** as described in the supporting project documentation available at the time of the assessment.

The screening evaluates the processing activity from the perspective of **Article 35 GDPR** to determine whether it is likely to result in a **high risk to the rights and freedoms of natural persons**. The assessment considers the nature, scope, context and purposes of the processing together with the categories of personal data processed, the data subjects affected, the technologies employed and the safeguards incorporated into the documented solution.

The scope of this screening includes:

- the documented processing activities performed by the solution;
- the categories of personal data processed;
- the categories of data subjects affected;
- the purposes of the processing;
- the technical architecture and supporting processing environment;
- AI-assisted processing and the role of human oversight;
- third-party service providers and international data transfers;
- the technical and organisational measures implemented to mitigate privacy risks; and
- the documented governance controls supporting the processing activity.

This screening is based exclusively on the documented solution design and associated governance documentation. It does not constitute a full Data Protection Impact Assessment, a technical security assessment, a penetration test or a legal opinion regarding GDPR compliance.

The screening outcome reflects the documented processing activities at the time of assessment. Significant changes to the processing purposes, system architecture, AI capabilities, categories of personal data, scale of processing or risk profile should trigger a renewed DPIA Screening to determine whether a full DPIA becomes necessary.

6. Portfolio Note

This document has been prepared as part of a professional Privacy Governance portfolio demonstrating the practical application of GDPR governance processes within a fictional enterprise environment.

The assessment methodology has been informed by the General Data Protection Regulation (EU) 2016/679 and, in particular, the European Data Protection Board (EDPB) Guidelines 4/2019 on Article 25 – Data Protection by Design and by Default.

While the underlying solution is fictional, the governance approach, documentation structure and assessment methodology are intended to reflect practices commonly applied within mature privacy governance programmes.

7. Screening Information

Field	Value
Screening Trigger	New product / pre-production privacy assessment
Project Stage	Pre-production / solution design
Processing Activity	AI-assisted document classification
Organisation	Veltrixa ApS (Fictional)
Solution	Veltrixa Cloud AI Document Classification Service
Controller	Veltrixa ApS
Primary Assessment Objective	Determine whether the documented processing is likely to result in a high risk requiring a DPIA under Article 35 GDPR
Assessment Scope	End-to-end processing lifecycle of the documented solution
Primary Evidence	Veltrixa Data Flow Mapping v1.0
Supporting Evidence	Privacy by Design Review v1.0
Screening Performed By	Privacy Governance Office
Assessment Date	July 2026

8. Referenced Documentation

Document	Purpose	Status
Veltrixa Data Flow Mapping v1.0	Primary source describing the processing activities, personal data flows, system architecture and governance arrangements forming the basis of the DPIA Screening.	Available
Privacy by Design Review v1.0	Assessment of the documented implementation of Privacy by Design principles and supporting privacy controls.	Available
High-Level Architecture Diagram	Supporting evidence describing the technical solution architecture and system components.	Available
Personal Data Flow Diagram	Supporting evidence illustrating the lifecycle and movement of personal data throughout the solution.	Available
Trust Boundary Diagram	Supporting evidence describing security zones, trust boundaries and system interactions.	Available
Data Protection Impact Assessment (DPIA)	To be completed only if the screening concludes that the processing is likely to result in a high risk under Article 35 GDPR.	Not Required (Current Assessment)

9. Screening Methodology

This DPIA Screening has been conducted using an evidence-based assessment methodology designed to determine whether the documented processing activity is **likely to result in a high risk to the rights and freedoms of natural persons**, thereby requiring a **Data Protection Impact Assessment (DPIA)** under **Article 35 GDPR**.

The assessment is based on the documented processing activities and supporting governance documentation prepared for the **Veltrixa Cloud AI Document Classification Service**. Rather than evaluating technical implementation through testing, the screening considers the documented characteristics of the processing activity together with the safeguards incorporated into the solution design.

The primary sources of evidence for this screening are the **Veltrixa Data Flow Mapping v1.0** and the **Privacy by Design Review v1.0**, supported by the accompanying High-Level Architecture Diagram, Personal Data Flow Diagram and Trust Boundary Diagram. These documents provide the information necessary to assess the nature, scope, context and purposes of the processing, together with the technical and organisational measures implemented to mitigate privacy risks.

The screening has been performed by assessing the documented processing activity against recognised high-risk processing criteria derived from **Article 35 GDPR** and supporting regulatory guidance. Each criterion has been evaluated individually using documented evidence before determining its contribution to the overall risk profile of the processing activity.

Each screening criterion is assessed using a consistent evaluation framework comprising the following elements:

- **Screening Criterion** – identifies the criterion being assessed.
- **Present** – records whether the criterion applies to the documented processing.
- **Evidence** – references the supporting documentation.
- **Risk Contribution** – evaluates the significance of the criterion in the overall privacy risk assessment.
- **Assessment** – documents the rationale supporting the conclusion for the individual criterion.

The outcome of the screening is based on the combined assessment of all applicable criteria rather than on any single factor in isolation. Where the documented processing changes significantly or additional high-risk characteristics are introduced, the screening should be repeated to determine whether a full DPIA becomes necessary.

10. DPIA Screening Assessment

10.1 Assessment Approach

The DPIA Screening Assessment evaluates whether the documented processing activities associated with the **Veltrixa Cloud AI Document Classification Service** exhibit characteristics that are likely to result in a **high risk to the rights and freedoms of natural persons**, thereby requiring a **Data Protection Impact Assessment (DPIA)** under **Article 35 GDPR**.

The assessment has been conducted using the methodology described in Section 9 and is based exclusively on the documented solution design and supporting governance documentation. The evaluation considers both the inherent characteristics of the processing activity and the technical and organisational measures implemented to reduce privacy risks.

Rather than assigning a decision based on a single criterion, the assessment considers the cumulative effect of all relevant risk indicators. Individual criteria may increase the overall privacy risk; however, the final screening outcome reflects the documented processing activity as a whole, together with the safeguards implemented to mitigate those risks.

Each screening criterion is evaluated using a consistent assessment matrix containing the following elements:

Assessment Element	Description
Screening Criterion	The individual Article 35 / regulatory screening criterion being assessed.
Present	Indicates whether the criterion applies to the documented processing activity.
Evidence	References the supporting documentation used during the assessment.
Risk Contribution	Evaluates the extent to which the criterion contributes to the overall privacy risk profile.
Assessment	Provides the rationale supporting the conclusion for the individual criterion.

The combined outcome of these assessments forms the basis for the final screening decision presented in Sections **10.3** and **11**.

10.2 Screening Criteria Assessment

Screening Criterion	Present	Evidence	Risk Contribution	Assessment
New or innovative technology	Yes	Data Flow Mapping, PbD Review	Medium	AI is used to support document classification; mandatory human review significantly reduces privacy risk.
Automated decision-making with legal or similarly significant effects	No	PbD Review	Low	AI recommendations are subject to mandatory human validation before acceptance.
Large-scale processing	No	Data Flow Mapping	Low	The documented processing does not indicate large-scale processing within the meaning of Article 35 GDPR.
Special category personal data	Possible	Data Flow Mapping	Medium	Customer documents may contain special category data; processing is limited to the documented business purpose and protected by appropriate safeguards.
Processing of vulnerable data subjects	No	Business Context	Low	The solution is not designed to target vulnerable individuals as a distinct category of data subjects.
Systematic monitoring	No	Data Flow Mapping	Low	The documented processing does not involve systematic monitoring of publicly accessible areas or individuals.
Matching or combining datasets	No	Data Flow Mapping	Low	The solution does not combine datasets for profiling or secondary purposes.
International data transfers	Limited	Data Flow Mapping	Low	Processing is hosted within the EEA; documented transfers remain subject to appropriate safeguards where applicable.

10.3 Screening Conclusion

The DPIA Screening has evaluated the documented processing activities associated with the **Veltrixa Cloud AI Document Classification Service** against the screening criteria described in **Article 35 GDPR** and the methodology presented in this document.

The assessment identified several characteristics that warrant consideration during privacy risk evaluation, including the use of AI-assisted document classification, the potential processing of special category personal data contained within customer documents and the use of cloud-based infrastructure. These characteristics contribute to the overall privacy risk profile of the processing activity but have been assessed together with the documented technical and organisational safeguards implemented within the solution.

The documented evidence demonstrates that the identified privacy risks are appropriately mitigated through a combination of governance and security controls, including mandatory human review of AI-assisted classifications, clearly defined processing purposes, role-based access controls, documented retention and deletion procedures, secure processing environments and comprehensive supporting documentation.

Having considered both the inherent characteristics of the processing and the effectiveness of the documented safeguards, the processing activity is **not considered likely to result in a high risk to the rights and freedoms of natural persons** within the meaning of **Article 35 GDPR**.

Accordingly, the documented processing does **not** meet the threshold requiring a mandatory Data Protection Impact Assessment (DPIA) at the time of this assessment.

This conclusion applies solely to the documented processing activities within the defined scope of this screening. Should the nature, scope, context or purposes of the processing change significantly, or should additional high-risk processing characteristics be introduced, the organisation should perform a new DPIA Screening to determine whether a full DPIA becomes necessary.

11. Overall Screening Decision

Based on the documented evidence reviewed and the assessment criteria applied throughout this DPIA Screening, the processing activities associated with the **Veltrixa Cloud AI Document Classification Service** are **not considered likely to result in a high risk to the rights and freedoms of natural persons** within the meaning of **Article 35 GDPR**.

The documented solution incorporates a combination of technical and organisational measures that effectively mitigate the identified privacy risks. These include mandatory human review of AI-assisted document classification, clearly defined processing purposes, role-based access controls, documented retention and deletion procedures, secure

processing environments and comprehensive governance documentation supporting the processing lifecycle.

Screening Decision

A full Data Protection Impact Assessment (DPIA) is not required for the documented processing activities assessed within the scope of this screening.

The decision is based on the documented processing activities, the implemented safeguards and the overall assessment that the processing is not likely to result in a high risk to the rights and freedoms of natural persons.

This decision remains valid only for the documented solution design and processing activities reviewed during this assessment. Any significant changes affecting the nature, scope, context or purposes of the processing, or introducing additional high-risk characteristics, should trigger a new DPIA Screening to determine whether a full DPIA becomes necessary.

12. Key Findings & Recommendations

ID	Finding / Recommendation	Priority	Status
F-01	The documented processing activity does not currently meet the threshold requiring a mandatory Data Protection Impact Assessment under Article 35 GDPR.	Low	Closed
F-02	Mandatory human review significantly reduces the privacy risks associated with AI-assisted document classification.	Low	Closed
F-03	The documented governance documentation provides sufficient evidence to support the DPIA Screening decision.	Low	Closed
F-04	Future changes affecting AI functionality, processing purposes, processing scale or categories of personal data should trigger a new DPIA Screening.	Medium	Open

13. Approval

Role	Name	Approval Status	Date
Privacy Reviewer	—	Pending	—
Business Owner	—	Pending	—
Technical Owner	—	Pending	—
